

MODEL. PILETURNER PT1800-20

TECHINCAL DATA:

Capacity.	Max	2000kg
High Capacity Max		1800mm
High Capacity Min		390mm
Platform dim.		1200*2400mm
Machine width.		2400mm
Machine length.		2550mm
Machine high.		2100mm
Machine Weight.		1750kg
Operation.	Manual / Automatic HMI Screen	
Cycle time.	Approx. 20-25 pallets/hour	
Voltage.	400V - 3 facer + N + PE	

Samzon Pile Turner PT1800-20 is a stationary pallet turner is used to change pallets, damaged pallet layer or for removing paper spacer or freezer spacer. **This machine can be used for very long pallets, up to 3500mm, and platforms can move to a minimum of only 390mm.** The pallet is fed into the machine using a pallet truck or pallet jack. The machine can either rotate 90-degrees or 180-degrees depending on your needs. The platforms is pressed together against the pallet and stopped by a pressure switch, there can be adjusted easily.

Changing pallets, either because of a defect pallet or swapping it to a plastic pallet, the new pallet is placed on top of the product, the platforms press down on the product, rotate 180-degrees, and the product is now standing on its new pallet. This does require manual pallet lifting, to place the new pallet on top - to avoid manual lifts a different type of pallet-inverter is recommended.

The pallet turner can be delivered with a variety of extra equipment and surface treatments.
